## Abstracts

Polycarbonate diol (PCD) is a kind of polyol chemical materials, with two ends -OH functional group molecular, and molecular weight ranges from hundreds to thousands. Its molecular chain contains aliphatic alkyl and carbonate repeat unit, chemical property resemble aliphatic polyester and polyether polyol rather than general polycarbonate materials. Polycarbonate diol usually used for the synthesis of urethane resin, acrylic resin, polyester resin and other materials. It can also be used as polyurethane-based coating formulations synthetic leather, inside decorative material of the car, smart phone, computer and other products, providing an extreme durability and a high performance to the final polymer.
