An Arterial Blood Gas (ABG) Needle is a specialized medical instrument used to collect a sample of blood from an artery for analysis. This procedure is commonly performed to measure the levels of oxygen, carbon dioxide, pH, and other gases in the blood, which provides essential information about a patient's respiratory and metabolic function. The needle is typically inserted into an artery, such as the radial or femoral artery, due to the high pressure in these vessels, which allows for a more accurate assessment of gas exchange in the lungs.
