## Abstracts

According to our latest research, the global Automated Securities Trading market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Automated securities trading is the process of using computer programs and algorithms to execute securities transactions. This trading method automatically executes buying, selling and other trading operations through preset trading rules and conditions without manual intervention. Automated securities trading is usually based on pre-written trading strategies, using real-time market data and technical indicators to make trading decisions, aiming to improve trading efficiency, reduce transaction costs, and achieve more precise market participation.

Automated securities trading is an important innovation in the field of financial technology. It achieves comprehensive digitization and automation of the securities trading process by utilizing advanced algorithms and technologies. This trading method can effectively reduce transaction costs, improve transaction execution efficiency, and reduce the impact of human factors on trading decisions, thereby providing investors with a more stable and reliable trading experience. However, automated securities trading also faces risks such as algorithm failure and market fluctuations, which require investors to carefully evaluate and manage them to ensure the robustness and sustainability of trading strategies.
