According to our (Global Info Research) latest study, the global Automated Semen Analyzer market size was valued at US\$ 662 million in 2024 and is forecast to a readjusted size of USD 888 million by 2031 with a CAGR of 4.4% during review period.

An automated semen analyzer is a sophisticated laboratory device designed to assess the quality and characteristics of semen samples with high precision and speed. These analyzers use advanced technology such as computer vision, image processing, and motion analysis to measure key parameters, including sperm concentration, motility, morphology, and viability. By automating the process, these systems reduce human error, ensure consistency in results, and allow for faster analysis compared to traditional manual methods. Automated semen analyzers are commonly used in fertility clinics, sperm banks, and research labs to evaluate male fertility and assist in assisted reproductive technologies like in vitro fertilization (IVF).
