According to our (Global Info Research) latest study, the global Automatic Enzyme Label Analyzer market size was valued at US\$ 56.4 million in 2024 and is forecast to a readjusted size of USD 92.5 million by 2031 with a CAGR of 7.4% during review period.

The automatic enzyme label analyzer is a laboratory device used to measure chemical, biological or physical reactions, properties and analytes in microtiter plates. A microtiter plate consists of small wells in which individual reactions take place. These reactions convert the presence of an analyte or the development of a biochemical process into an optical signal. The microplate reader has the advantages of no radioactive pollution, strong specificity, fast detection speed, low operating cost, and high precision. It is widely used in poultry disease detection, food detection, human disease detection, aquatic product detection, drug detection and other fields. According to different working principles and uses, microplate readers can be divided into four types: multi-functional microplate readers, light absorption microplate readers, chemiluminescent microplate readers and fluorescent microplate readers.
