Abstracts

According to our (Global Info Research) latest study, the global Automatic High Speed Hand Dryers market size was valued at US\$ 4853 million in 2024 and is forecast to a readjusted size of USD 9959 million by 2031 with a CAGR of 10.9% during review period.

Automatic High Speed Hand Dryers are operated automatically when hands are placed a few inches below the infrared sensor. These touchless hand dryers do not have to have your hands placed on the hand dryer to be turned on automatically.

Hand dryers have been popular with industries for their apparent economies. According to manufacturers, hand dryers can cut costs by as much as 99.5% (for example a company may spend \$2340.00 per year on paper towels, where as the hand dryer expenditure would be as low as \$14.00 per year - this will vary according to the cost of paper towels and electricity). They require very little maintenance compared to paper towels, which must be replaced. An added benefit is the removal of the paper waste. Hand dryers represent a larger initial investment, so those responsible for facility management must do a careful cost analysis to determine whether they are cost effective in their building. Costs are always relative to the kWh cost that the facility is charged by its provider. In the UK, this will typically be around 10-12p, the only way to compare costs accurately is to work out the rated energy consumption and divide it by the number of dries the hand dryer is capable of performing back to back in 1 hour, this will give the energy consumption per dry. The world's lowest energy hand dryer uses just 1 watt-hour per dry and is rated at 0.24 kW.
