A Automatic Thromboelastography (TEG) Hemostasis Analyzer is a medical diagnostic device that assesses the coagulation (clotting) ability of blood by measuring the physical properties of a blood sample as it clots and dissolves over time. Unlike traditional coagulation tests that only measure certain phases of clotting, thromboelastography provides a dynamic, comprehensive profile of the entire coagulation process. This tool is widely used in surgery, critical care, trauma care, and other fields where rapid assessment of a patient's hemostatic (bleeding and clotting) status is crucial.
