Abstracts

According to our (Global Info Research) latest study, the global Automotive Charging Contactor market size was valued at US\$ 3334 million in 2025 and is forecast to a readjusted size of US\$ 4866 million by 2032 with a CAGR of 5.7% during review period.

Global production of automotive charging contactors is projected to reach 180 million units by 2025, with an average price of \$18 per unit.

Automotive charging contactors are electromagnetic switching devices used to control the on/off state of electric vehicle charging circuits. They operate by using a coil to generate a magnetic field that drives contacts to close or open, ensuring the safe transmission and isolation of electrical energy. Their core functions include connecting the power supply to the vehicle's battery system during charging and automatically disconnecting the circuit after charging is complete or in case of a malfunction, preventing risks such as overload and short circuits and ensuring the safety of the charging process. Upstream: This includes electrical contact materials (such as silver cadmium oxide and copper alloys), insulating materials (such as plastics and ceramics), and electromagnetic coils, with raw materials accounting for over 60% of the cost. Downstream: Applications include new energy vehicle charging piles, on-board chargers, and battery management systems, forming close collaborative relationships with OEMs and charging operators.
