Abstracts

According to our (Global Info Research) latest study, the global Automotive Crankshaft Sensor market size was valued at US\$ 3794 million in 2024 and is forecast to a readjusted size of USD 5485 million by 2031 with a CAGR of 5.5% during review period.

An automotive crankshaft sensor, also known as a crank position sensor (CPS) or engine speed sensor, is a vital component in modern vehicles. It is an electromechanical device designed to monitor the rotational speed and position of the crankshaft in an internal combustion engine. The crankshaft sensor generates signals that provide essential information to the engine control unit (ECU) or engine management system, allowing for precise ignition timing and fuel injection control. This, in turn, enhances engine performance, fuel efficiency, and emissions control. Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
