According to our (Global Info Research) latest study, the global Automotive Electrically Driven Oil Pump market size was valued at US\$ 737 million in 2024 and is forecast to a readjusted size of USD 2129 million by 2031 with a CAGR of 16.6% during review period.

Stricter fuel efficiency and emissions regulations worldwide have pushed automotive manufacturers to explore technologies that improve engine efficiency. Electrically driven oil pumps can be controlled more precisely, reducing energy wastage and improving fuel efficiency. Modern vehicles often use start-stop systems to save fuel by turning off the engine when the vehicle is stationary. Electric oil pumps can provide lubrication and maintain oil pressure even when the engine is off, ensuring a smooth restart and reducing wear on engine components. The growing market for hybrid and electric vehicles (EVs) has created a demand for efficient auxiliary systems that reduce the load on the main electric drive. Electric oil pumps can help manage lubrication and cooling systems in hybrid and electric powertrains without relying on the internal combustion engine.
