Abstracts

According to our (Global Info Research) latest study, the global Automotive Pneumatic Controlled Seats market size was valued at US\$ 966 million in 2023 and is forecast to a readjusted size of USD 1170 million by 2030 with a CAGR of 2.6% during review period.

The Automotive Pneumatic Controlled Seats adds a pneumatic device in the seat, the air pressure is provided by the air pump in the engine compartment, and there are 4 or more air pressure chambers at the rear of the seat to realize the protection of the lumbar spine. At the same time, these air chambers are controlled by electronic oscillators, which change the pressure in the air chambers according to the pre-written program, so that the seat surface moves accordingly, so as to achieve the purpose of massaging the driver/passenger.

Trend:

1. Seat Comfort and Customization

Seat comfort is still an important development factor in the electric vehicle industry, and the pneumatic seat system can provide better support and comfort by adjusting the inflation and deflation of the seat, thereby reducing fatigue and discomfort caused by long-term driving. And customization options that allow users to adjust the firmness and support of the seat will gradually become easier and more common.

2. Lightweight Design

The automotive industry is increasingly focusing on reducing vehicle weight and improving fuel efficiency to lower emissions. Lightweight seat components and effective seat airbag design help improve fuel economy.

3. Synchronous Cooperative Development

Due to the fierce competition in the automobile market, the market will pay more attention to specialization. Seat manufacturers and Automotive OEMs cooperate in

production, which greatly reduces costs and improves efficiency, thereby shortening the production cycle of the vehicle. Simultaneous cooperative development will help OEMs accelerate the industrialization of new vehicles.
