According to our (Global Info Research) latest study, the global Automotive Power Discrete market size was valued at US\$ 669 million in 2024 and is forecast to a readjusted size of USD 906 million by 2031 with a CAGR of 4.5% during review period.

Discrete devices, such as diodes & transistors, are single semiconductors. Power transistors are important type of discrete device which are used to control voltages, minimize power consumption, & minimizing heat generation in a variety of applications. Devices built for reliable, robust, & power-efficient energy storage applications are referred as power discrete. They're crucial parts of circuits designed to increase the battery life of portable electronics. Ultrafast diodes for DC-DC converters & rectification in the secondary side of OBS (on-board-charger) systems are examples of automotive-grade power discrete devices. For example, in medium voltage automotive applications, silicon-based IGBT discrete has been the device of choice.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
