According to our (Global Info Research) latest study, the global Automotive Wireless-Charging Ferrite Sheet market size was valued at US\$ 62.03 million in 2025 and is forecast to a readjusted size of US\$ 292 million by 2032 with a CAGR of 24.8% during review period.

An automotive wireless-charging ferrite sheet is a high-permeability soft-magnetic layer placed behind the in-car Tx coil (typically Mn-Zn / Ni-Zn ferrite or ferrite-filled composites). It concentrates flux to improve coupling/efficiency, reduces stray fields and metal-proximity eddy losses/heat, mitigates EMI, and supports safety features such as FOD and thermal compliance, under automotive reliability constraints.

Upstream includes ferrite materials (Mn-Zn/Ni-Zn), resins/adhesives and carrier films; midstream includes forming (sintered vs composite), lamination/taping, die-cutting, and automotive reliability/consistency control; downstream includes integration into in-car wireless charging modules where safety/compliance (e.g., FOD/thermal) and EMI performance are validated.

In 2025, global automotive wireless-charging ferrite sheet production reached approximately 50 million pcs, with an average global market price is \$ 0.85-1.5 per pcs.
