## Abstracts

According to our (Global Info Research) latest study, the global Autosampler Chromatography Syringe market size was valued at US\$ 297 million in 2024 and is forecast to a readjusted size of USD 458 million by 2031 with a CAGR of 6.4% during review period.

In liquid chromatography, the syringe functions primarily as a pipette or liquid-transfer device that loads a sample loop. The same largely holds true for gas chromatography. The syringe generally does not take an active role in injection, which occurs only after the sample has been displaced from the syringe. Syringes are gas-tight and leak-proof.

With the maturity of the downstream pharmaceutical industry, food testing, environmental protection and other fields as well as the continuous innovation of global column production technology, the global column industry will maintain steady growth in the future
