According to our (Global Info Research) latest study, the global Axial Flux Motor for Robots market size was valued at US\$ 196 million in 2024 and is forecast to a readjusted size of USD 331 million by 2031 with a CAGR of 7.8% during review period.

Axial Flux Motor, also known as disc motor or flat motor, is a special type of motor whose magnetic flux direction flows along the axis of the motor. The rotor and stator are usually arranged in parallel disks, which gives the motor an overall flat shape and saves space. In the field of high-precision industrial robots, axial flux motors have stronger practical value than radial flux motors. Their higher power density, torque density and shorter axial length meet the requirements for fast joint drive motors. , small size and light weight requirements.
