Axial Length Measuring Instrument is a device used to accurately measure the axial length of the eye, which is the distance from the corneal apex to the retinal macula center. Axial length is an important parameter for refractive status and is commonly used in cataract surgery planning, refractive surgeries (such as laser eye surgery), and the diagnosis and treatment of various eye conditions. The instrument may use different measurement technologies, such as ultrasound, optical coherence tomography (OCT), or optical interferometry, to provide precise axial length data.
