Bacillus cereus selective agar medium is a specialized microbiological growth medium designed to selectively isolate and enumerate bacillus cereus, a spore-forming bacterium known to cause foodborne illness. The medium contains nutrients that support the growth of b. Cereus while inhibiting the growth of competing microorganisms. It typically includes selective agents such as egg yolk emulsion and mannitol, which facilitate the detection of lecithinase activity. The agar may also be enhanced with indicators to differentiate b. Cereus colonies based on their metabolic activities. This medium is widely used in food safety laboratories and clinical microbiology for detecting contamination in food products.
