## Abstracts

According to our (Global Info Research) latest study, the global Baijiu Lees Resource Utilization market size was valued at US\$ 96 million in 2023 and is forecast to a readjusted size of USD 518 million by 2030 with a CAGR of 25.7% during review period.

Baijiu lees resource utilization refers to the process of turning the residual byproducts of Baijiu production into valuable products, including animal feed, biofuels, bioplastics, and more. This process involves various technologies to extract proteins, amino acids, and other nutrients or convert organic matter into bioenergy.

**Government Policies:**

Chinese governmental policies increasingly encourage the use of industrial byproducts in a more sustainable way. This drives investment and technological development in Baijiu lees resource utilization.

**Circular Economy Solutions:**

The utilization of Baijiu lees supports China's transition toward a circular economy, where waste is minimized and resources are reused. Baijiu lees can be processed into animal feed, fertilizers, and bioenergy, reducing the environmental footprint of Baijiu production.

**Technological Barriers:**

The technologies for efficiently extracting useful products from Baijiu lees are still developing, and their scalability is limited. Small distilleries may not have access to the necessary technologies, making it difficult to utilize the lees effectively.

**Rise of Green Technologies:**

There is a growing trend in adopting green technologies for industrial waste recycling. Baijiu lees are increasingly being integrated into these systems to create value-added products, such as bioplastics, renewable energy, and feed for livestock.
