Barbed polydioxanone (PDO) suture is a new type of absorbable surgical suture made of PDO material. Barbed suture is a type of knotless surgical suture that has barbs on its surface. While suturing tissue, these barbs penetrate inside the tissue and lock them into place, eliminating the need for knots to tie the suture. Conventional sutures rely on a surgeon's ability to tie secure knots; barbed sutures provide a knotless alternative in some surgical situations.
