According to our (Global Info Research) latest study, the global Battery-Powered Garden Shears market size was valued at US\$ 348 million in 2025 and is forecast to a readjusted size of US\$ 587 million by 2032 with a CAGR of 7.8% during review period.

Battery-powered garden shears are handheld, cordless, electric gardening tools powered by rechargeable battery packs. They convert electrical energy into mechanical energy through a built-in motor, driving reciprocating blades for cutting. Their core design aims to provide a more labor-saving, cleaner, quieter, and more flexible solution for pruning hedges and shrubs. Demand stems directly from the growing global market demand from home consumers, professional gardeners, and landscaping companies for improved gardening efficiency, reduced physical strain, and an environmentally friendly, quiet operating experience. The upstream supply chain begins with battery cell and pack manufacturers, motor and electronic controller suppliers, and specialty steel and plastic particle suppliers. Midstream specialized manufacturing and assembly plants are responsible for precision stamping of blades, injection molding of housings, and final assembly. Downstream distribution occurs globally through large chain building materials supermarkets, garden specialty stores, online e-commerce platforms, and brand dealer networks, ultimately reaching end users. In 2024, the production volume of electric garden shears was estimated at 3-6 million units, with an average selling price of approximately US\$20-150 per unit, a gross profit margin of approximately 35%, and a single production line capacity of approximately 100,000-400,000 units per year.
