Abstracts

According to our (Global Info Research) latest study, the global Bed Warmer market size was valued at US\$ 1205 million in 2024 and is forecast to a readjusted size of USD 1329 million by 2031 with a CAGR of 1.4% during review period.

An bed warmer has an electrical heating device built in that is meant to be placed above the bed sheet. In Commonwealth countries, however, it refers to an electric mattress pad that is kept below the bottom bed sheet. They comprise a control unit that allows the user to adjust the heat produced by the device. Larger size beds may even have two separate control units for both sides of the bed. An electric blanket can be useful to heat the bed to a certain level before sleeping to keep the occupant cosy and warm. Typical low voltage electric blankets work on 12-24 volts and are made of thin carbon fibre wires. The electric blanket was invented more than a century ago by American inventor Samuel Russell, while the first recorded sale in the electric blanket market was by the Samson United Corporation in 1930. An electric blanket uses heating elements or insulated wires that are put into a fabric that heats up when connected to an electrical socket. The temperature control unit, located between the electrical point and blanket, controls the current that enters the heating elements of the blanket. Modern devices use carbon fibre wires to provide heat for the user's comfort. These wires are much less conspicuous and bulky than the ones used in the past. Today, there are a lot of variations available in the electric blanket market like under blankets, over-blankets, throws and duvets. What is common is the wiring that heats up when connected to the electric point. Buyers are truly spoilt for choice now as they can select blankets with dual controls, those that remain on throughout the night, and those that are machine washable or even those that regulate themselves according to the user's body temperature

Although there are many restrictive factors for the development of the Electric Blankets market, overall, the demand for Electric Blankets continues to rise. Especially in recent years, Overblankets has become more and more popular. More people are buying electric blankets because they are warm and more environmentally friendly than air conditioners. With the advent of globalization, the market scope of the industry has expanded, and the international market has high development potential. The electric blanket industry is fully competitive, and the product update cycle is relatively fast. Therefore, continuous technological innovation and achievement transformation activities are the key support for the company's business development. Companies must innovate to stay ahead of competition. Suppliers have made innovative reforms in product types, product customization, and product appearance to promote market development. However, Electric Blankets have low production technology content and great market potential. The influx of small and medium-sized enterprises into the market has led to fierce market competition and market fragmentation. Fierce market competition has caused suppliers to reduce product prices to seize market share, and ultimately led to a decline in the profit margin of each supplier, which is not conducive to the sustained and healthy development of the entire market. The cost of Electric Blankets is mainly the cost of raw materials. The purchase of raw materials by each company is based on sales orders. If the prices of the above raw materials drop sharply in the short term, some raw material suppliers may delay or refuse quotations, and this will affect the normal production of the company. However, if the prices of the raw materials rise sharply in the short term, the company's product interest rates may fall, and raw material purchases will take up more liquidity. In addition, safety accidents will also restrict the development of the electric blanket market; Once a major safety accident occurs, people will doubt the safety of the Electric Blankets, causing a short-term decline in sales.
