Beech timber refers to hardwood materials produced from beech logs through sawing, drying, and grading processes, including sawn timber and primary processed wood products. It features a fine and uniform grain, stable mechanical properties, and good machinability and finishing performance. Beech timber is widely used in furniture manufacturing, interior decoration, flooring, stair components, engineered wood products, and selected industrial applications, making it one of the key hardwood species in European and global markets.

The upstream of beech timber mainly consists of forest management and log harvesting companies, with key raw material sources located in beech-rich regions such as Germany, France, Austria, and Eastern Europe. The midstream includes sawmills and drying processors responsible for log sawing, grading, kiln drying, and primary processing. Downstream customers mainly include furniture manufacturers, flooring and interior decoration companies, engineered wood product producers, and selected construction and industrial users, with products distributed through wholesalers and timber traders.
