A benchtop glass bioreactor is a small laboratory device commonly used for cell culture and microbial fermentation experiments in the biotechnology and biopharmaceutical fields. Its reaction vessel is made of transparent glass, which is convenient for observing and monitoring the culture process. The benchtop design makes it suitable for placement on a laboratory workbench, and it is easy to control key parameters such as temperature, stirring rate, pH value, dissolved oxygen, etc. to ensure a precise culture environment. This type of bioreactor is often used for process development, formulation optimization and small-scale research, and is particularly suitable for preliminary testing and data collection under laboratory conditions.
