Bending Testing Service is a professional service that evaluates the mechanical properties, durability and deformation resistance of materials or structures by performing bending experiments on them. This test is usually applied to a variety of materials such as metals, plastics, composite materials, etc., and can measure the bending strength, elastic modulus, breaking point and deformation behavior of the material under a certain force or load. Bending testing not only helps analyze the stress and deformation that the material may encounter during actual use, but also provides key data support for optimizing design, improving production processes or ensuring product quality. Bending tests are often performed using equipment such as three-point bending, four-point bending, three-point or four-point bending testing machines, and are performed in accordance with international standards and specifications to ensure the reliability and accuracy of the test results.
