According to our (Global Info Research) latest study, the global Benzonase Endonuclease market size was valued at US\$ 359 million in 2024 and is forecast to a readjusted size of USD 520 million by 2031 with a CAGR of 5.8% during review period.

Benzonase endonuclease is a highly efficient, nonspecific nuclease enzyme that degrades all forms of DNA and RNA into small oligonucleotides of 2-5 base pairs. Derived from *Serratia marcescens*, this enzyme works under a wide range of conditions, including varying pH and salt concentrations, and is resistant to many chemical and thermal denaturation processes. Benzonase is widely used in biopharmaceuticals, biotechnology, and research applications to remove nucleic acid contamination from protein samples, cell lysates, and viral preparations. Its high specificity and efficiency make it ideal for ensuring purity and improving downstream processing in workflows like chromatography, protein purification, and vaccine development.
