## Abstracts

According to our (Global Info Research) latest study, the global Binder-free Electrode market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The binder-free electrodes generally show high Li<sup>+</sup> and electron conductivity, decent electrolyte wettability and large volume expansion space, and strong bonding strength. Therefore, the binder-free electrodes exhibit better capacity, cycling, and rate performances than the PVDF/active materials/carbon black system.
