According to our (Global Info Research) latest study, the global Biodegradable Coronary Stents market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Biodegradable Coronary Stents, also known as bioresorbable stents or scaffolds, are a type of stent used in the treatment of coronary artery disease. Unlike traditional metal stents, which remain permanently in the body, biodegradable stents are designed to provide temporary support to the artery and then gradually dissolve or degrade over time. This process typically takes 2 to 3 years, depending on the material used.
