According to our (Global Info Research) latest study, the global Biodegradable Montmorillonite Desiccant market size was valued at US\$ 41.24 million in 2025 and is forecast to a readjusted size of US\$ 54.16 million by 2032 with a CAGR of 4.0% during review period.

Biodegradable montmorillonite desiccant is an environmentally friendly moisture absorbent made from natural montmorillonite mineral. It utilizes the natural porous structure of montmorillonite to absorb moisture. It is non-toxic, non-corrosive, and biodegradable, with strong moisture absorption capabilities. It is commonly used in food, pharmaceuticals, and electronic products, and is a green alternative to traditional silica gel desiccants, meeting military and environmental standards.

The upstream core raw material is natural bentonite (with a montmorillonite content typically exceeding 80%), mainly found in saline-alkali soils or volcanic ash metamorphic rock deposits. Unlike ordinary desiccants, its 'biodegradable' property is highly dependent on the upstream packaging materials. Global sales in 2025 are projected to be approximately 117,900 tons, with an average market price of approximately US\$340 per ton. The industry's gross profit margin is in the range of 10%–25%.
