## Abstracts

According to our (Global Info Research) latest study, the global Biodegradable Polymer Drug-eluting Stents (BP-DES) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Biodegradable Polymer Drug-eluting Stents (BP-DES) are medical devices used in the treatment of coronary artery disease. Unlike traditional stents that use permanent polymer coatings to release drugs, BP-DES incorporate biodegradable polymers that gradually degrade over time, leaving behind only the bare metal stent. These stents are designed to release drugs, typically anti-proliferative or anti-inflammatory agents, to prevent restenosis (re-narrowing of the artery) after angioplasty. The biodegradable polymer technology reduces the risk of long-term complications associated with permanent polymer stents, such as inflammation and late stent thrombosis, while still providing effective drug delivery to inhibit cell growth and maintain vessel patency.

This report is a detailed and comprehensive analysis for global Biodegradable Polymer Drug-eluting Stents (BP-DES) market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
