According to our (Global Info Research) latest study, the global Biological Sample Storage Services market size was valued at US\$ 986 million in 2025 and is forecast to a readjusted size of US\$ 1444 million by 2032 with a CAGR of 5.6% during review period.

To address the problems of sample degradation, information loss, and poor research reproducibility caused by unstable storage conditions, irregular management, and long-term preservation needs of biological samples, biological sample storage services have emerged. Since the rise of the biobank concept and the development of cryogenic biology technology in the latter half of the 20th century, this service has made significant progress in supporting basic life sciences research. It has now developed into a professional service system encompassing various technological approaches, including ultra-low temperature freezing, vapor-phase liquid nitrogen preservation, automated cryogenic storage systems, and supporting information management platforms. It provides a complete chain of standardized and informatized solutions from collection, processing, and storage to logistics. This service is widely used in disease research, drug development, precision medicine, population genetics, forensic science, and biodiversity conservation. It ensures the activity and data integrity of biological samples for decades or even longer, greatly improving the reliability and traceability of research data, and providing crucial basic resource guarantees for continuous innovation in life science research and the development of human health.
