According to our (Global Info Research) latest study, the global Bioresorbable Metals Cardiovascular Stents market size was valued at US\$ 1036 million in 2024 and is forecast to a readjusted size of USD 1822 million by 2031 with a CAGR of 8.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Bioresorbable Metals Cardiovascular Stents are advanced medical devices made of biodegradable metal materials designed to provide temporary physical support for coronary artery lesions. Over time, these stents will be gradually absorbed by the body after completing their functions, avoiding late complications that may be caused by the long-term retention of traditional metal stents, such as stent thrombosis and restenosis. The ultimate goal of such a stent is to promote natural healing of the vessel and return the vessel to a state more similar to its natural state without the stent, thereby reducing long-term risk for the patient and improving quality of life.
