Abstracts

According to our (Global Info Research) latest study, the global Bismuth Carboxylate Catalyst market size was valued at US\$ 293 million in 2025 and is forecast to a readjusted size of US\$ 389 million by 2032 with a CAGR of 4.1% during review period.

Bismuth Carboxylate Catalysts are a class of environmentally friendly metal catalysts with bismuth ions (Bi³⁺) as the core and organic carboxylate ligands. Their core value lies in their ability to efficiently catalyze reactions (such as the NCO-OH reaction in polyurethane synthesis) while possessing the outstanding advantages of being non-toxic, environmentally friendly, and capable of replacing harmful heavy metal catalysts such as lead and mercury. The upstream industry mainly provides two categories of basic raw materials: firstly, the bismuth metal source, mainly high-purity bismuth trioxide; and secondly, organic carboxylate ligands, such as neodecanoic acid, isooctanoic acid, and lauric acid. The quality and purity of these organic acids directly determine the performance and cost of the final catalyst.

In 2025, global sales are projected to be approximately 30,000 tons, with an average market price of around US\$9,500 per ton. The industry's gross profit margin is expected to be in the range of 15%–30%.
