Abstracts

According to our (Global Info Research) latest study, the global Bismuth Neodecanoate market size was valued at US\$ 82.32 million in 2025 and is forecast to a readjusted size of US\$ 108 million by 2032 with a CAGR of 4.0% during review period.

Bismuth neodecanoate is an organometallic compound, typically a pale yellow transparent liquid. It is primarily used as an environmentally friendly polyurethane (PU) catalyst, replacing toxic organic lead, tin, and mercury catalysts. Its characteristics include safety, low odor, solvent-free composition, and stable performance. The upstream industry mainly provides the basic raw materials required for the production of bismuth neodecanoate, such as bismuth nitrate, bismuth oxide, and other bismuth salts or compounds, which are the source of the core metal element in bismuth neodecanoate. Downstream applications are extensive; bismuth neodecanoate, as an environmentally friendly organobismuth catalyst, is an important alternative to traditional toxic organotin catalysts.

In 2025, global sales are projected to be approximately 10,000 tons, with an average market price of around \$8,000 per ton. The industry's gross profit margin is expected to be in the range of 15%–30%.
