## Abstracts

According to our (Global Info Research) latest study, the global Bismuth Octoate Catalyst market size was valued at US\$ 161 million in 2025 and is forecast to a readjusted size of US\$ 213 million by 2032 with a CAGR of 4.1% during review period.

Bismuth Octoate Catalyst is a highly efficient and environmentally friendly catalyst. It is widely used in the production of polyurethane (PU) materials, coatings, etc., and can also be used as a heat stabilizer for PVC products. It can replace toxic organic mercury and lead catalysts, providing excellent hydrolysis resistance and performance. The main upstream raw materials include bismuth compounds and isooctanoic acid. As a rare metal compound, the price fluctuations and supply stability of bismuth compounds directly affect the production cost of bismuth octoate. The quality and purity of isooctanoic acid affect the catalytic performance of the final product. Global sales in 2025 are projected to be approximately 13,000 tons, with an average market price of approximately US\$12/kg. The industry's gross profit margin is in the range of 15%–30%.

This report is a detailed and comprehensive analysis for global Bismuth Octoate Catalyst market.
