Bispyrithione is an antimicrobial/antifungal active ingredient used mainly for preservative and anti-dandruff or anti-microbial functions in personal care and related formulations, produced from upstream pyrithione chemistry (typically involving pyridine-derived intermediates and metal-salt complexation steps) and supplied downstream into shampoos/scalp treatments, rinse-off cleansers, and other antimicrobial formulations such as cosmetics and some household/industrial products.

In 2025, global Bispyrithione production reached approximately 1414 MT, with an average global market price of around US\$ 35.8 per kg. The global single-line production capacity ranges from 100 to 150 MT per year. The industry's gross profit margin is approximately 20%-25%.
