According to our (Global Info Research) latest study, the global BLBP (B-FABP) pAb market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

BLBP (B-FABP), namely brain fatty acid binding protein (Brain Fatty Acid Binding Protein), its polyclonal antibodies (Polyclonal Antibody) refer to a group of immunoglobulin mixtures produced by multiple B cell clones that can recognize and bind to different antigenic epitopes on BLBP protein. These antibodies have important applications in immunology, biochemistry and molecular biology, and cell biology.

BLBP polyclonal antibodies are mainly used in biomedical research, disease diagnosis and possible treatment. In the research of neuroscience and neurodegenerative diseases (such as Alzheimer's disease, Parkinson's disease, etc.), BLBP is a key protein in fatty acid metabolism in the brain, and its polyclonal antibodies have important research value. With the deepening of research in these fields, the demand for BLBP polyclonal antibodies will further increase. In summary, with the overall growth of the antibody drug market and the in-depth development of biomedical research, the BLBP polyclonal antibody market will also maintain a certain growth trend.
