According to our (Global Info Research) latest study, the global Blind Cane(White Cane) market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

A blind cane is a device used by the visually impaired to guide or identify the surrounding environment. Because the whole body is white, it is also called 'White Cane'. It is mainly composed of four parts: wrist strap, handle, stick body and stick tip.

A blind cane is an aid that helps the visually impaired walk. As the population ages and the number of visually impaired people continues to increase, the market demand for blind sticks also increases. First of all, from the perspective of market space, the blind cane market is still in its infancy in China, and the market space is small. However, as the number of visually impaired people increases and people's requirements for quality of life improve, the blind cane market will gradually expand. Secondly, from the perspective of market competition, there are few brands in the domestic blind cane market, and the market competition is not fierce. However, as the market expands, more and more companies will enter the blind cane market, and market competition will intensify. Again, from the perspective of market development prospects, the blind cane market has broad development prospects. As the number of visually impaired people continues to increase, the demand for the blind cane market will continue to rise. At the same time, with the continuous development of technology, the design and function of the blind stick will continue to improve, and the user experience will also continue to improve. This will attract more consumers to buy blind canes. Generally speaking, although the market space for the blind cane is currently small, with the increase in the number of visually impaired people and the improvement of people's requirements for

quality of life, the market space for the blind cane will gradually expand.
