Blood preservatives are chemical solutions added to collected blood to maintain its viability and functionality during storage and transportation. These preservatives prevent the degradation of blood cells and preserve essential biochemical properties, extending the shelf life of blood and its components for transfusion or medical use. Common blood preservatives include anticoagulants like citrate, phosphate, and dextrose, which prevent clotting and provide necessary nutrients to blood cells. The use of blood preservatives is crucial for blood banks and medical facilities, ensuring that stored blood remains safe, effective, and ready for use in medical treatments, surgeries, and emergencies.
