According to our (Global Info Research) latest study, the global Booster Optical Amplifiers (BOA) market size was valued at US\$ 1341 million in 2024 and is forecast to a readjusted size of USD 2147 million by 2031 with a CAGR of 7.0% during review period.

Booster Optical Amplifiers (BOAs) are single-pass, traveling-wave amplifiers that perform well with both monochromatic and multi-wavelength signals. Since BOAs only amplify one state of polarization, they are best suited for applications where the input polarization of the light is known.

One of the important drivers of the optical amplifier industry is the increase in demand from data centers. Increased use of cloud services, growth in e-commerce and big data analytics has led to increased demand for data. As these trends lead to an exponential increase in the amount of data that needs to be processed and stored, the demand on data centers continues to increase. Data centers require high-speed, reliable communication networks to transfer large amounts of data quickly and efficiently. Optical amplifiers play a vital role in communication systems in data centers as they help boost signal strength and prevent signals from becoming too noisy and enable high-speed data transmission. Smart city deployments involve the use of various technologies such as Internet of Things (IoT) sensors, traffic management systems, and security cameras, all of which require high-speed, reliable data transmission. Equally important is the increased need for high-speed data transmission. The growing demand for faster and more reliable data communication systems and the development of new technologies such as 5G are driving the need for optical amplifiers for high-speed data transmission.
