According to our (Global Info Research) latest study, the global Bragg Fiber market size was valued at US\$ 116 million in 2024 and is forecast to a readjusted size of USD 167 million by 2031 with a CAGR of 5.5% during review period.

Bragg fiber is a subset of photonic bandgap fibers, has a solid or hollow core surrounded by periodic dielectric nanolayers with low and high reflective indexes. Because of optical interference in their microstructure, the Bragg fibers are colorful under ambient illumination. However, no colorants or dyes are used in preparation of such fibers and therefore these fibers are not susceptible to color fading. Moreover, due to photonic band gap effect, Bragg fibers guide the light in the lower reflective index core and uniformly emit a portion of guided color without any requirement of mechanical perturbations. Therefore, these fibers are mechanically superior to the other light emitting fibers. By varying the number of layers in the Bragg reflector, the intensity of side emission can be controlled. On the other hand, the overall color of Bragg fiber can be varied by controlling the relative intensities of ambient light and guided light, which enable passive color change in textiles. Furthermore, with stretching of PBG Bragg fibers, the reflected colors also change proportionally to the extent of stretching.

At present, the global communications industry is developing rapidly, with new technology highlights such as meta-universe, 5G, cloud technology application, artificial intelligence and big data, etc., which have become the main driving force for the rapid updating and iteration of the communications industry. From the perspective of competition, the industry concentration of each segment of the global communications industry is relatively high at present, and the leading companies are mainly concentrated in China and the United States. And as the R&D investment of the leading companies increases, and the related technology development becomes more and

more mature, the healthy competition and cooperation among the enterprises is expected to boost the scale of the global communications industry to further increase. According to our research, the global communications industry market size in 2022 will be about 286.1 billion U.S. dollars.
