Brassica Glyceride is a plant-derived emollient/texture-modifying ester blend (typically made by reacting glycerin with fatty acids from Brassica oils such as rapeseed/canola) whose industry chain runs from upstream Brassica oilseed cultivation/crushing and glycerin supply, through midstream fatty-acid preparation and esterification/refining into cosmetic-grade material, to downstream use in personal care and cosmetics—especially lotions/creams, lip products, hair conditioners, sunscreens, and makeup—where it improves slip, softness, and formulation feel.

In 2025, global Brassica Glyceride production reached approximately 2294 MT, with an average global market price of around US\$ 14.2 per kg. The global single-line production capacity ranges from 300 to 400 MT per year. The industry's gross profit margin is approximately 20%-25%.
