According to our (Global Info Research) latest study, the global Busbar for EV market size was valued at US\$ 1774 million in 2024 and is forecast to a readjusted size of USD 6394 million by 2031 with a CAGR of 20.3% during review period.

Busbar for Electric vehicle (EV) is essential components of EV power systems. They are conductive bars that provide a pathway for electricity to flow between the battery, motor, and other electrical components of the vehicle. The busbars are typically made of copper or aluminum and are designed to withstand high temperatures and electrical currents. Because electric vehicles require high levels of power to operate, the busbars must be able to handle significant amounts of electrical current without overheating or melting. As EV technology continues to advance, busbars are becoming increasingly important in ensuring the safe and efficient operation of electric vehicles.

Global key players of Busbar for EV include Intercable Automotive Solutions (Aptiv), Everwin Technology, BSB Technology Development, Methode Electronics, Rogers Corporation, etc. The top five players hold a share about 61%. Asia-Pacific is the largest market, and has a share about 69%, followed by EMEA with share 23%. In terms of product type, Copper Busbars are the largest segment, accounting for a share of 95%. In terms of application, BEV is the largest field with a share about 85 percent.
