## Abstracts

According to our (Global Info Research) latest study, the global C1qI2 PAb market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

C1q-like protein 2 (C1qL2) polyclonal antibody is a specific antibody mixture against C1q-like protein 2 (C1qL2). C1qL2 is a 287-amino acid secretory protein containing a C1q domain and a collagen-like domain. It belongs to a large multimeric protein family whose globular domains are highly homologous to C1QA and structurally similar to TNF family members. The C1qL2 gene is located on human chromosome 2q14.2, and the gene encoding the protein contains about 2653 base pairs. C1q-like protein 2 polyclonal antibody refers to a mixture of antibodies against different antigenic epitopes of C1qL2 obtained by separation and purification from the serum of immunized animals after immunizing animals with C1q-like protein 2 (C1qL2) or its related antigens. This antibody mixture has a wide range of applications in biomedical research, such as detecting the expression level of C1qL2 protein, studying the biological function of C1qL2, and exploring the relationship between C1qL2 and related diseases.
