Calprotectin is a calcium-containing protein derived from neutrophils and macrophages. Its expression is tissue or cell specific and can be used as a marker of acute inflammatory cell activation. Calprotectin is widely distributed in human cells, tissues and body fluids. It is the main protein of granulocytes, monocytes and keratinocytes. Neutrophil calprotectin is distributed in the lysozyme cell fluid in vitro, accounting for approximately 5% of the total cellular protein. It is a marker of neutrophil renewal and is elevated under many inflammatory conditions. It can be detected in plasma, urine, stool, cerebrospinal fluid, saliva, synovial fluid, and colon biopsies. The calprotectin test kit is an in vitro diagnostic tool used to detect calprotectin content in stool or other biological samples. Calprotectin is a protein released by neutrophils whose levels are significantly elevated in inflammatory conditions (e.g., inflammatory bowel disease, gastroenteritis), so calprotectin test kits are often used to evaluate intestinal inflammation. Presence and severity.
