Abstracts

According to our latest research, the global Carbon Neutral Certification Services market size will reach USD million in 2031, growing at a CAGR of %over the analysis period.

Carbon neutrality refers to the total amount of greenhouse gas emissions directly and indirectly generated by an enterprise, organization or individual within a certain period of time, reducing carbon emissions through its own energy saving, and then offsetting the carbon emissions generated through purchasing emission reduction, planting trees and carbon capture, etc., to achieve 'net-zero emissions'. Carbon Neutral Certification is a certification that proves that an enterprise, organization or individual has achieved carbon neutral status in its activities. The goal of carbon neutrality is to balance the emission of greenhouse gases with the act of removing or reducing those gases to ensure net zero or lower carbon emissions. Its core purpose is to encourage enterprises and organizations to reduce greenhouse gas emissions and promote the development of a low-carbon economy, while raising public awareness and consciousness of climate change issues. Currently, there are three common carbon neutral certification standards in the international arena, namely ISO 14064, PAS 2060/2050 and INTE B5. ISO 14064 is broken down into three parts: ISO 14064-1 is a specification and guideline for quantifying and reporting GHG emissions and removals at the organizational level; ISO 14064-2 is a specification and guideline for quantifying and reporting GHG emissions and removals at the project level; and ISO 14064-2 is a specification and guideline for quantifying and reporting GHG emissions and removals at the project level. ISO 14064-2 is a specification and guideline for quantifying, monitoring and reporting GHG emission reductions and removal enhancements at the project level.
