Abstracts

According to our (Global Info Research) latest study, the global Carboxy Silicone Oil market size was valued at US\$ 423 million in 2025 and is forecast to a readjusted size of US\$ 568 million by 2032 with a CAGR of 4.3% during review period.

In 2025, the global production of carboxy silicone oil was approximately 120,000 tons, with an average selling price of around US\$3,426 per ton. Single-line production capacity is approximately 3,000-6,000 tons per year, with an average gross profit margin of about 15-25%. Carboxy silicone oil is a reactive organosilicon polymer with carboxyl groups at its ends. It forms durable properties through chemical bonding with various substrates (such as leather and textiles), primarily providing excellent waterproofing, softness, smoothness, and durability. It is widely used in leather finishing, textile hydrophilic softening, and thermoplastic resin modification, imparting long-lasting functionality to materials, such as providing long-lasting waterproofing effects in leather tanning.

The upstream core raw materials for carboxy silicone oil mainly include polysiloxane base polymers and carboxyl-containing modifiers. Its downstream industry chain is highly concentrated in the manufacturing of mass-market consumer goods, with core applications in the personal care industry (as a key raw material for silicone elastomers that create a refreshing skin feel in shampoos and skincare products), and is widely used in the textile printing and dyeing industry (as a hydrophilic and durable softening agent). It is also used as a functional additive in plastics processing and coatings.
