## Abstracts

According to our (Global Info Research) latest study, the global CBN Lapping Compound market size was valued at US\$ 102 million in 2025 and is forecast to a readjusted size of US\$ 221 million by 2032 with a CAGR of 11.7% during review period.

CBN lapping compound is a paste-like precision abrasive and polishing material made by mixing cubic boron nitride micropowder with a specific carrier (such as oil, grease, wax, or water-based solution). The core demand stems from three aspects: First, performance requirements: downstream industries' products (such as high-hardness steel tools and precision molds) demand extreme sharpness, wear resistance, surface finish, and dimensional accuracy, which traditional abrasives struggle to meet. Second, efficiency and cost requirements: CBN polishing paste can significantly improve polishing efficiency and consistency, reduce labor, and lower the overall cost of high-end machining. Third, process upgrade requirements: advancements in materials science (such as the application of harder and stronger steels) and the rise of the market for handcrafted, customized high-end tools have driven the widespread adoption of superhard abrasive precision machining processes. The upstream supply chain of CBN polishing paste mainly includes raw material supply: CBN micropowder (synthesized from hexagonal boron nitride under high temperature and pressure), carrier media (such as base oils, synthetic waxes, and specialty greases), and packaging materials. Its downstream applications directly target end-user manufacturing and high-end handicrafts, including precision knife manufacturing (such as high-end kitchen knives, razors, and carving knives), the mold industry (precision mold core polishing), and core components for aerospace and automotive engines (such as the precision machining of turbine blades and fuel nozzles). In 2025, the production of CBN lapping compound is estimated at approximately 330 tons, with an average selling price

of around US\$300,000 per ton and a gross profit margin of approximately 60%. The production capacity of a single production line is about 10 tons per year.
