Cell imaging is an important information source in scientific research experiments, and the automation of image acquisition and analysis has paved the way for the development of cell biology. In recent years, with the rapid development of scientific research in China, researchers have put forward higher requirements for the quality of cell imaging and the automation of its acquisition and analysis. At the same time, scientists continue to explore, find a number of better and more effective cell imaging methods, and even real-time monitoring of the process of cell activity, to provide more accurate images for the clinical transformation of cell biology.

The cell imaging analyzer is a kind of instrument that takes the cell as the test object, records the image of the cell in the porous plate by the microscopic imaging method, and analyzes the information in the image to analyze the activity of the material in the cell.

The industry's leading producers are BioTek, PerkinElmer and GE Healthcare, with revenue ratios of 22.97%, 19.17% and 11.60%, respectively.
