According to our (Global Info Research) latest study, the global Ceramic Bulletproof Vest market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Ceramic materials, particularly boron carbide and alumina, have been employed in the construction of hard armor plates, which are used as inserts in bulletproof vests and other types of body armor. These plates, often used in conjunction with soft armor materials, are designed to provide enhanced protection against high-velocity projectiles and rifle rounds. Ceramic plates used in body armor are engineered to be lightweight and provide effective ballistic protection by dispersing the energy of the bullet upon impact. The ceramic materials used possess high hardness and strength properties, making them capable of withstanding and fragmenting the bullet or bullet core, thereby reducing the penetration of the projectile.
