According to our (Global Info Research) latest study, the global Ceramic Fire-Resistant Silicone Rubber market size was valued at US\$ 91.6 million in 2024 and is forecast to a readjusted size of USD 159 million by 2031 with a CAGR of 8.2% during review period.

Ceramic refractory silicone rubber is a new type of polymer composite fireproof material, with high-temperature silicone rubber (HTV) as the main material. At room temperature, it has the basic characteristics of silicone rubber, such as non-toxic, odorless, high and low temperature resistance, ozone aging resistance, weather aging resistance, excellent electrical insulation performance, and also has good processing performance of ordinary high-temperature silicone rubber compound. Refractory silicone rubber is quickly burned into a hard and complete shell at temperatures of 500-1000 °C, ensuring that wires and cables are not damaged in the event of a fire and providing strong protection for power and communication. Ceramic refractory silicone rubber can replace mica tape as the fire-resistant layer for fire-resistant cables. Especially for medium and low voltage fire-resistant wires and cables, they can not only be used as fire-resistant layers, but also as insulation layers at the same time.
